The solution accepts payment using a payment gateway (e.g., authorize.net, heartland) to accept credit card purchases.</p> <p>The Vendini on-site event solution provides point of sales hardware (e.g., iPads, iPod) and software (i.e., the interface to the payment gateways) to accept payment at events (e.g., festivals, sporting events).</p> <p>Both solutions use the payment gateways and receive a tokenized PAN. Only the token is retained after initial payment processing.</p>
Describe how and in what capacity your business is otherwise involved in or has the ability to impact the security of cardholder data.	NA, after initial payment PANs are no longer retained, only tokens.

For example:

- Connections into and out of the cardholder data environment (CDE).
- Critical system components within the CDE, such as POS devices, databases, web servers, etc., and any other necessary payment components, as applicable.

Vendini's solution allows its business client to accept card not-present and card-present transactions from event customers. Purchases can be made using their website (eCommerce site using HTTPS connection to payment gateway services and tokenization) and/or on-site event ticket purchases using wire/wireless mobile devices (e.g., hardened iPad) to connect to payment gateway services and tokenization).

This is achieved using client app on mobile device connected to web service API connecting to the payment server to the payment gateway using TLS 1.2. Similarly the eCommerce site uses HTTPS to web service, to the payment server to the payment gateway.

Payment gateway returns authorization code and tokenized PAN.

Does your business use network segmentation to affect the scope of your PCI DSS environment?
(Refer to "Network Segmentation" section of PCI DSS for guidance on network segmentation)
